

Theory Working Group (#NucAThery)

Nuclear Astrophysics Theory: Needs

Help wanted: support for theoretical efforts that connect experiment and observation

Example: There is a Chandra theory program to support interpretation of *Chandra* results

There should be a counterpart for the interpretation of FRIB results

New faculty lines that bridge astro and nuclear theory

Example: RIKEN/BNL center

Cross-training of students and postdocs

Example: Embedding a nuclear theory student within an astrophysics group (recent *PRL* on triple-alpha rate)

This is a cost-effective way to build a community
